Subject: Migratory Bird Clearance for Building 123

----- Message Contents -----

On Thursday, February 12, 1998, Ecology personnel accompanied Building 123 Demolition project personnel on a walkdown of the building to ensure that no migratory bird nests would be affected during demolition. The entire building exterior was inspected, as were several small out buildings and the 113 Guard Post. No nests were found on any of these buildings. Provided demolition proceeds on schedule, and the buildings have been demolished by April 30, 1998, no further inspections will be required.
